Power-relay-module for boosting controller outputs to 16A switching capacity
for SCHNEID module controller MR12

Order number: 300.18424

Order code: Leistungs-Relais-Modul

Overview:

Relay module for amplifying up to 2 controller outputs to 16A switching capacity. For use if, for example, larger pumps with high currents are to be controlled. There are also distribution terminals for L-N-PE on it. The two relays are socketed and can be easily exchanged at any time and, if necessary, replaced by other types or semiconductor modules. The module has the same dimensions as a heating circuit module and can be inserted into an empty space in the DIN-RAIL mounting tray.
